Corrigendum to “The uplift of the East Africa – Arabia swell” [Earth Science Review, 257 (2024), 104901]

Andrea Sembroni^{a,*}, Claudio Faccenna^{a,b}, Thorsten W. Becker^{c,d,e}, Paola Molin^a

^a Department of Science, Roma Tre University, Rome, Italy

^b GFZ, German Research Center for Geoscience, Germany

^c Institute for Geophysics, Jackson School of Geosciences, The University of Texas at Austin, USA

^d Department of Earth and Planetary Sciences, Jackson School of Geosciences, The University of Texas at Austin, USA

^e Oden Institute for Computational Engineering & Sciences, The University of Texas at Austin, USA

Acknowledgements

We thank the editor and anonymous reviewers for their efforts and comments which served to improve this manuscript from its original version. We also thank Alistair Boyce for sharing his Moho constraint compilation, as well as all authors for publishing SKS splitting and seismic tomography models openly. Several figures were generated with the Generic Mapping Tools by the late, great Pal Wessel (Wessel et al.,

2019). This work was funded by the Italian Research Ministry (MUR-PRIN 2017–2021 "Intraplate deformation, magmatism and topographic evolution of a diffuse collisional belt: Insights into the geodynamic of the Arabia-Eurasia collisional zones" and MUR-Italy Departments of Excellence, L. 232/2016, art. 1, c. 314–337 granted for 2023–2027). We thank all projects participants for many fruitful discussions. TWB was supported by NSF EAR-1925939.
